MONTHLY WEATHER MAP

METEOROLOGICAL SERVICE, DOMINION OF CANADA

OCTOBER 1936

TEMPERATURE

In British Columbia, Alberta and the southern portion of the Yukon mean temperatures were higher than normal and generally elsewhere were below normal.

In the extreme southern districts of British Columbia temperatures were three to four degrees above normal for the most part although in a few localities the excess was barely two degrees. In the region of the upper Fraser the excess was two degrees or less but in the Peace River block was four to six degrees.

In the Peace River district of Alberta the excess was four to six degrees as far north as Peace River Crossing. In the foothill region the excess was three to five degrees. On the plains the excess was generally two or three degrees but less than two degrees immediately along the Alberta-Saskatchewan boundary. Along the lower reaches of the Peace and Athabaska Rivers towards Lake Athabaska temperatures were somewhat below normal.

In the western portion of the grain region in Saskatchewan temperatures were either normal or one degree below normal except in the Cypress Hills region where there was an excess over normal of two to four degrees. In the eastern portion of the grain region of this province, particularly in the northeast, temperatures were below normal, the deficiency reaching four or five degrees in the Yorkton-Kamsack region and in the region immediately to the southeast of Prince Albert.

In southeastern Manitoba mean temperatures were five to seven degrees below normal while in the extreme southwestern corner of the agricultural region the deficiency was between one and three degrees. Over the lake region of Manitoba the deficiency was six to eight degrees or more.

While in the lower Great Lakes region of Ontario there were some localities with mean temperatures one degree above normal, the most of this area reported temperatures one or two degrees below normal. North of Lake Huron towards James Bay and westward to Lake Superior and the Lake of the Woods the month was much cooler than a normal October with mean temperatures four to eight degrees below normal.

In Quebec immediately along the St. Lawrence River mean temperatures were either normal or one degree below normal. To the south of the St. Lawrence there were some areas with a deficiency of two or three degrees. To the north of the river, particularly along the divide between the St. Lawrence and Hudson Bay drainages there were deficiencies of four to seven degrees.

In the Atlantic Provinces the largest deviations below normal occurred in eastern New Brunswick and were two or three degrees. Along the shores of the Bay of Fundy temperatures averaged about normal but in the interior of southern Nova Scotia from the Annapolis valley to Liverpool there was a deficiency of one to three degrees. East of Halifax and in Cape Breton Island temperatures averaged about normal but in Prince Edward Island and the region of Nova Scotia immediately north of the Minas Basin there were deficiencies of two degrees or more.

In the region of the North Shore of the Gulf of St. Lawrence, the Strait of Belle Isle, and most of Newfoundland temperatures averaged about one or two degrees below normal. The City of St. John's, however, reported a mean temperature of one degree above normal.

Along the Labrador coast temperatures were apparently two to four degrees below normal and in Hudson Strait from four to six degrees below normal. Along the west coast of Hudson Bay and in the James Bay region the month was colder than a normal October by more than eight degrees, especially in the region of the Chesterfield Inlet where a deficiency of fourteen degrees was reported.

PRECIPITATION

On Vancouver Island the total precipitation for the month was below the normal amount by seventy-five per cent. Along the coast there was a deficiency of less than ten per cent. In the region of the lower Fraser valley and Burrard Inlet there were deficiencies of thirty-five to fifty per cent. In the Okanagan and Similkameen valleys the deficiency averaged seventy-five per cent. but in the Kettle, Kootenay, and south Thompson valleys the deficiency averaged eighty-five per cent. Along the upper Fraser River the deficiency was about fifteen per cent.

In the Peace River district of Alberta the excess over normal precipitation was more than seventy per cent. at some points and less than thirty per cent. at others. In the foothill region there was generally an excess over normal precipitation of twenty-five to thirty per cent. although at a few points two to three times the normal amount was reported. In the eastern portion of the grain region, however, many points reported less than the normal amount, the deficiency in some cases amounting to more than fifty per cent.

Along the northern margin of the grain belt in Saskatchewan excesses of ten to thirty per cent. were reported generally while a few points had more than twice the normal amount. Over the central and southern portions of the grain region in this province deficiencies of thirty to seventy per cent. were reported.

In Manitoba the average deficiency over the agricultural region was fifty-five per cent.

In northwestern Ontario from the Lake of the Woods to the north shore of Lake Superior deficiencies of thirty to fifty per cent. were reported generally although at a few points the deficiency was only fifteen per cent. Along the east coast of Lake Superior there were excesses over normal of five to twenty per cent. In the region north of the Georgian Bay towards James Bay the excess averaged about thirty-five per cent. although at Manitoulin Island the excess was about seventy-five per cent. In the region of the Lower Lakes there was an area south and east of the Georgian Bay with moderate deficiency but elsewhere excesses were twenty-five to thirty per cent. for the most part, except at the extreme western end of Lake Ontario where only the normal amount was reported.

In Quebec most of the region west of the Saguenay River towards the Ottawa River reported excesses of fifty to one hundred per cent. Along the lower St. Lawrence and the Gulf precipitation was generally deficient.

In the Atlantic Provinces heavy rains occurred in southern Nova Scotia where there was an excess ranging from three to sixty per cent. and the same was true of southern New Brunswick and some parts of the upper valley of the St. John River. In northern and southwestern New Brunswick moderate deficiencies were reported and the same was true of central Nova Scotia, parts of the Annapolis valley and Cape Breton Island. In Prince Edward Island an excess of less than ten per cent. was reported.

A. J. CONNOR

SPECIAL REPORTS

NOTE—Column H is Highest Temperature; Column L is Lowest Temperature; Column Tm is the mean temperature of the month; Column P is Precipitation in inches; Column I denotes total of bright sunshine in hours during the month; Column Sg. denotes depth of snow on ground in inches, where given.
